

What went well?

Overall, this sprint was fairly successful. Compared with the first sprint, we began work much earlier. By doing so, we were able to address issues with ample time left (for most issues). In addition to this, we worked together, as in we met up in person and coded together, much more than we did for the first sprint. Because we had learned how to use the tools necessary to succeed during the first sprint, this sprint was much easier and could be spent doing more development.

Completed User Stories:

As a user, I would like to view others profiles.

You can now search for and view other people's profiles

As a user, I would like to search for others based off my current location.

Upon profile creation, your current GPS location is recorded and can be used to find profiles who are within a specified distance from you.

As a user, I would like to search for others based off a city.

You can now search for a specified city and all profiles matching the city name will be displayed.

As a user, I would like to submit a rating and review paragraph for other users.

When viewing another person's profile, there is a button to leave a review as well as a list of reviews that have already been accredited to the profile you are viewing.

What did not go well?

Despite starting earlier than before, we ran into last minute issues. Unfortunately, the night before our sprint demo we ran into a significant error with one of the Android Activities on the front end side which caused the app to crash after a login. Since then the error has been dealt with, though it was a hindrance for the demo.

What can you improve?

In the upcoming sprint, we should complete user stories faster so that we can spend more time in the final week doing error testing and making sure that everything is working correctly.
